

BETTER FLOW SKIRT LINER

ENHANCING TRANSFER PRODUCTIVITY

- Sloping vertical edges encourage material flow
- Designed to replace standard liners
- Manufactured from any liner material
- Adjustable skirt liner to control gap between belt and liner
- Minimise material spillage

The 'Better Flow' Skirt Liner has been developed to encourage the flow of material in skirted areas and minimise material entrapment underneath and between the skirt liners.

The skirt liners can be designed to replace a mine-standard liner and can be manufactured from a material of the mine's choice.

The sloping vertical edges of the liner encourage material flow along and underneath the liner. The 'Better Flow' skirt liner will significantly reduce belt wear if not completely eliminate it.

The 'Better Flow' skirt liner is protected by Australian Patent Pending 2020100744.
