

# SEGMENTED ULTRASEAL SKIRTING

- Change-out skirt liners from outside of the chute/carry-belt.
- Eliminate gap between hard skirt and soft skirt to reduce belt damage.
- Improved material containment.
- Extended life of liners

## VIDEO LINKS

The H&B Segmented Ultraseal Skirt offers all the feature of the standard Ultraseal Skirt:

- 12 thick plate (strongest conveyor skirting available)
- Ni-hard OR studded Bisalloy Liners that can be adjusted 25mm upwards or 30mm downwards
- Soft skirt designed with a step which closes the gap between the primary seal and the front face of the skirt panel

Segmented Ultraseal Skirting features segmented skirting panels which allows access to skirt liners for liner change-out without having to climb on the belt. This skirt design includes a smart clamp to hold the ultra-seal soft skirt in place.

The segmented Ultraseal Skirting system will extend the life of the conveyor belt by preventing premature wear and grooving from material build up between the primary and secondary seal. Should the belt track poorly the Ultraseal rubber will maintain its shape and position and ever pop out thus providing a 100% seal.
