

# HDPE Conveyor Guards

## HIGH DENSITY POLYETHYLENE

- 15-year structural life
- Recycled materials
- Shatter proof
- Safe up to 90-degree temperatures
- Do not need painting
- 35% lighter

High density polyethylene (HDPE) conveyor guarding offers a lightweight, corrosion-free, low maintenance alternative to conventional guarding.

H & B Mining design and supply HDPE conveyor guards in both guarding systems; DILO (Drop-In, Lift-Out) guard design and Post-less Guard System.

Post-less Guards provide 100% access to all consumable skirt & idler components including idler rolls, skirt liner & skirt rubber. The post-less conveyor guard system utilises the EMRI (Easy Maintenance Retractable Idler) as a support mechanism for the guard.

The D.I.L.O. (drop in/lift out) conveyor guard system has been specifically developed for the Australian mining industry to provide a safe and easy way to remove and re-install guards. The D.I.L.O conveyor guard system is a sturdy design.

*All guards are made to Australian Standards. AS 4024:3610:2015 & AS4024:3611:2015.*
