

Eco-Range Conveyor Skirt Liner

- Safer Installation
- Cost Effective
- Conveyor Belt Protection
- Fixing Simplified
- Environmentally Friendly

The 'Eco-Range' conveyor skirt liner is a patented product of H & B Mining.

7 Tahiti Lane

The novelty in the H & B Eco-Range skirt liner is that the liner is designed to accommodate commercial bolts to fix the liners in place.

The Eco Standard Conveyor Skirt Liner is a full-thickness, cast ni-hard liner designed for impact areas. It's ability to utilise a commercial bolt reduces supply costs.

The Eco-light Skirt Liner is a hollowed, cast ni-hard liner designed economy and safety in mind for low impact areas. The innovative design reduces the overall mass of the skirt liner by up to 40% such that the conveyor skirt liner is safer to handle with lower supply costs also.

ADVANTAGES OF THE ECO-LIGHT CONVEYOR SKIRT LINER

- ✓ Installation and maintenance of the skirt liner is made safer and easier because of the reduced mass.
- ✓ Supply costs are reduced.
- ✓ The liner tolerances have been minimised therefore reducing the gaps between the skirt liners and the chances of material getting trapped between the liners and ripping the conveyor belt.
- ✓ The skirt liners are fixed to the skirt panel with commercial bolts.
- ✓ Due to the reduction in liner size there is less wastage when liner is discarded.
